# 2016 Atlantic Hurricane Season Recap

# A Look Back at the 2016 Atlantic Hurricane Season

- 15 named storms (12 on average)
- 7 hurricanes (6)
- 4 major hurricanes (3)
- 3 of 4 major hurricanes made landfall
- 1<sup>st</sup> above-average season since 2012

# Two U.S. Land-Falling Hurricanes: Hurricane Hermine and Hurricane Matthew

## *Hurricane Hermine*

- 1<sup>st</sup> hurricane to make landfall in Florida since Wilma in 2005
- Formed in the Gulf of Mexico
- Storm surge and heavy rainfall along the Florida gulf coast caused significant damage

## *Hurricane Matthew*

- First Category 5 since Hurricane Felix in 2007
- Affected the Caribbean and the southeastern coastline of the United States
- More than 1,600 deaths, mostly in Haiti

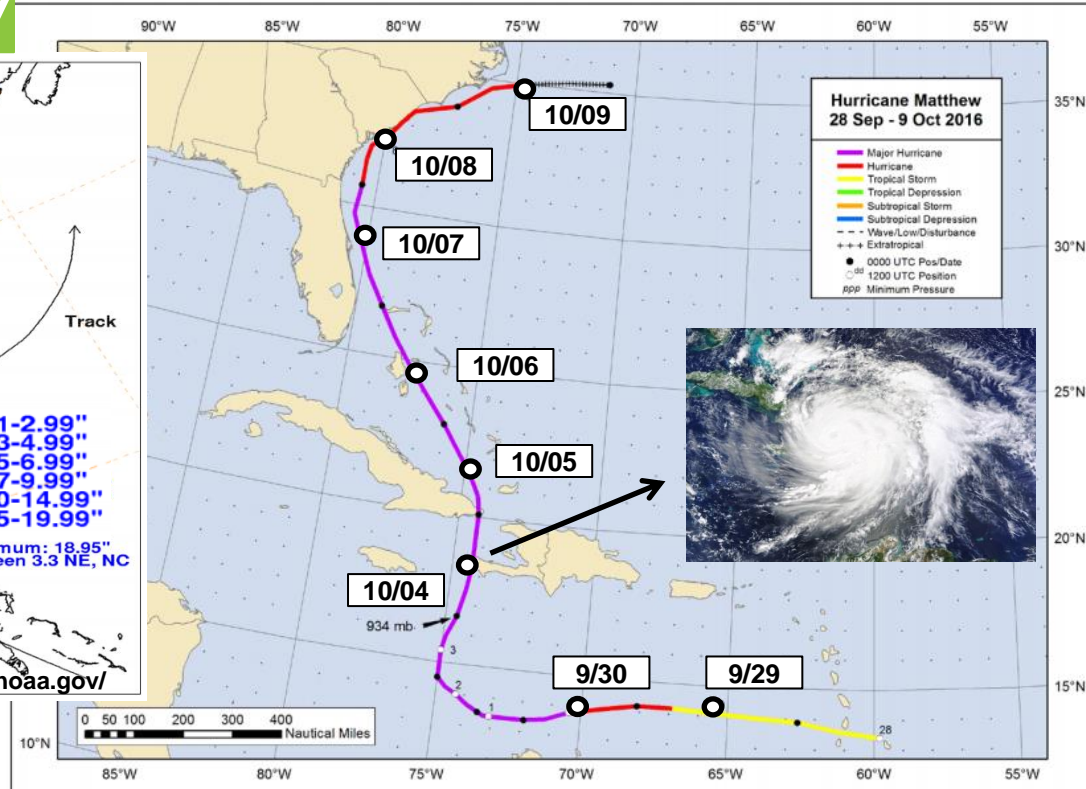

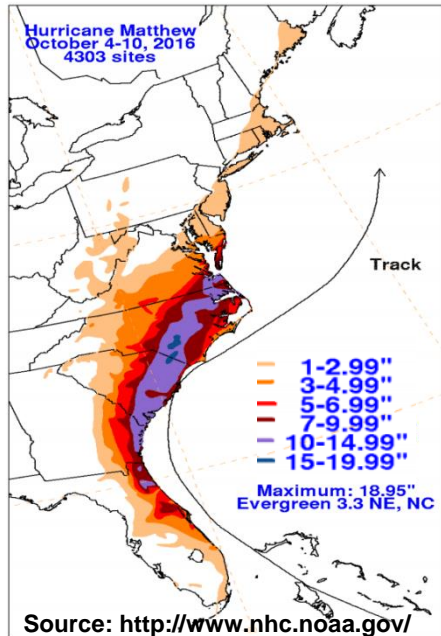

# 2016 Accumulated Cyclone Energy (ACE)

- Another measure of total destructive potential over a season is ACE
  - Defined as sum of squared maximum wind speed at each six-hourly advisory period ( $\times 10^{-4}$ )
- Typically ACE = 98
- Ended season at 134

# Longest Period Without a U.S. Major Hurricane Landfall

- Last major hurricane to strike the U.S. was Wilma in 2005
- The next-longest streak is 5 years
- As of this season, this streak continues, ***but just barely!***

## Pop Quiz!

- The 2016 Atlantic *hurricane* season was the longest on record, with Hurricane Alex forming in mid January and Hurricane Otto making landfall around Thanksgiving. TRUE or FALSE?

**TRUE!\* 320 days**

**\* 1951 was actually the longest season in the Atlantic (341 days) since an unnamed tropical storm formed on January 4<sup>th</sup> of that year.**

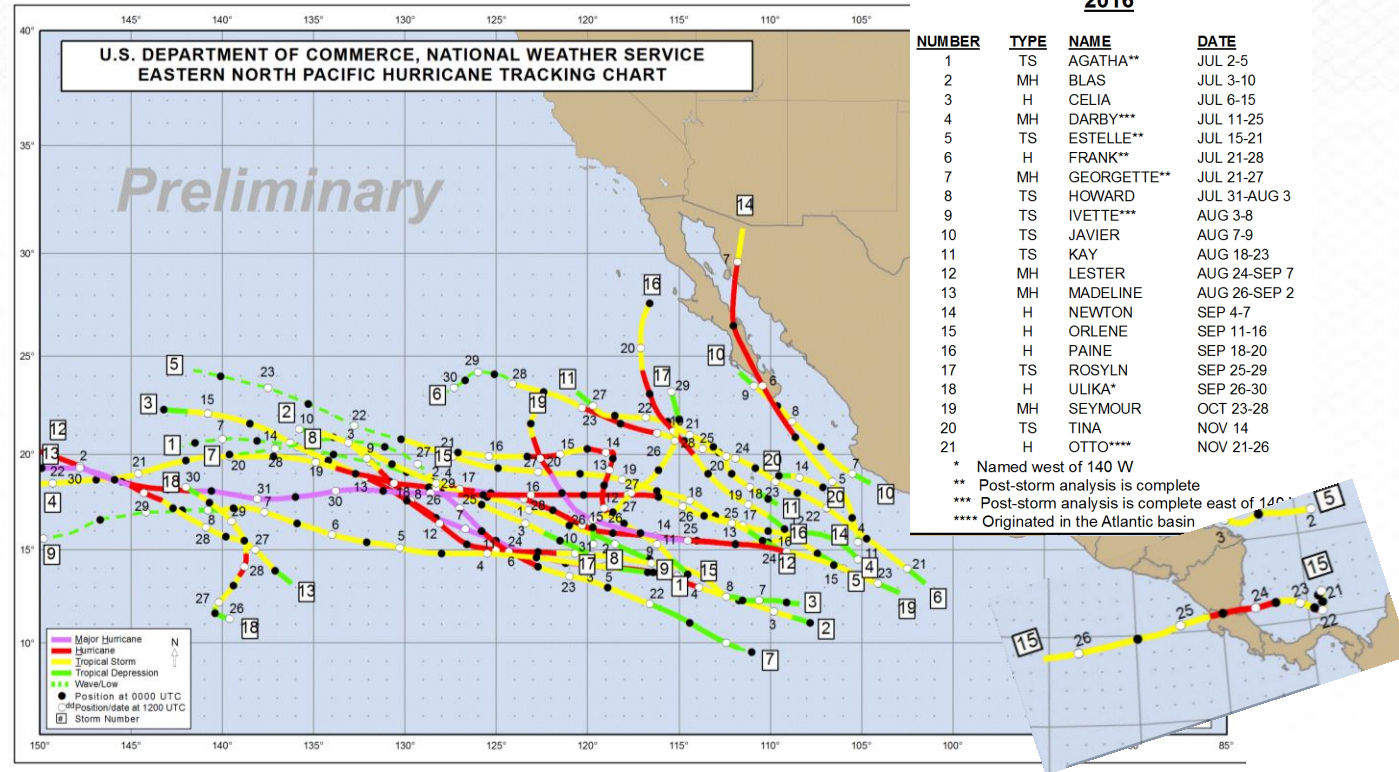

# 2016 Eastern Pacific Hurricane Season Recap

# Overview of the 2016 Eastern Pacific Hurricane Season

In 2016, the Eastern Pacific had an above-average active season:

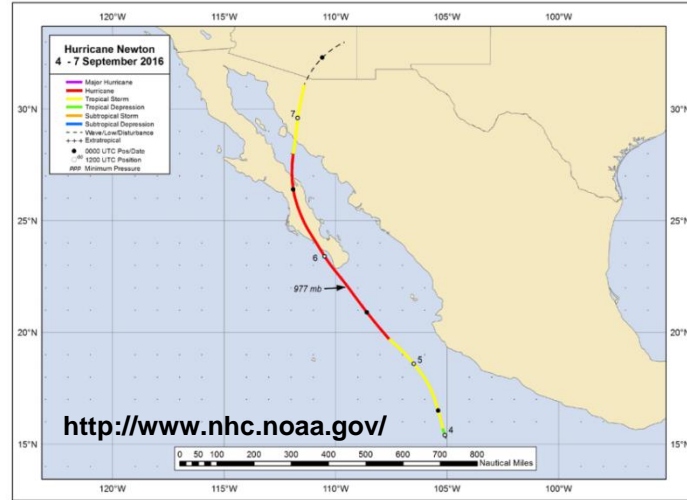

- 21 named storms
- 11 hurricanes
- 1 hurricane made landfall
- Otto crossed Central America

Source: <http://www.nhc.noaa.gov/>

# Hurricane Newton Brought Heavy Rain to Mexico and Southwestern United States

## Hurricane Newton

- Made landfall in Baja California peninsula
- Caused flooding along the coast of Mexico
- Storm remnants brought heavy rainfall to the southwestern United States, peaking at 5.67 in (144 mm) at Miller Carr Canyon in southeastern Arizona.

## Cabo San Lucas

## Tucson, AZ

## Pop Quiz!

- Hurricane Otto crossed Central America from the Caribbean to the Eastern Pacific last year. What was the last tropical cyclone to do that?

# Hurricane Cesar/Douglas (1996)

Storms were re-named when crossing basins back then!

(Areas of expected skill less than 0.3 are shaded in grey.)

# Long Term View of Risk

# Why is Near-Term Forecasting Not Suitable for Assessing Hurricane Risk?

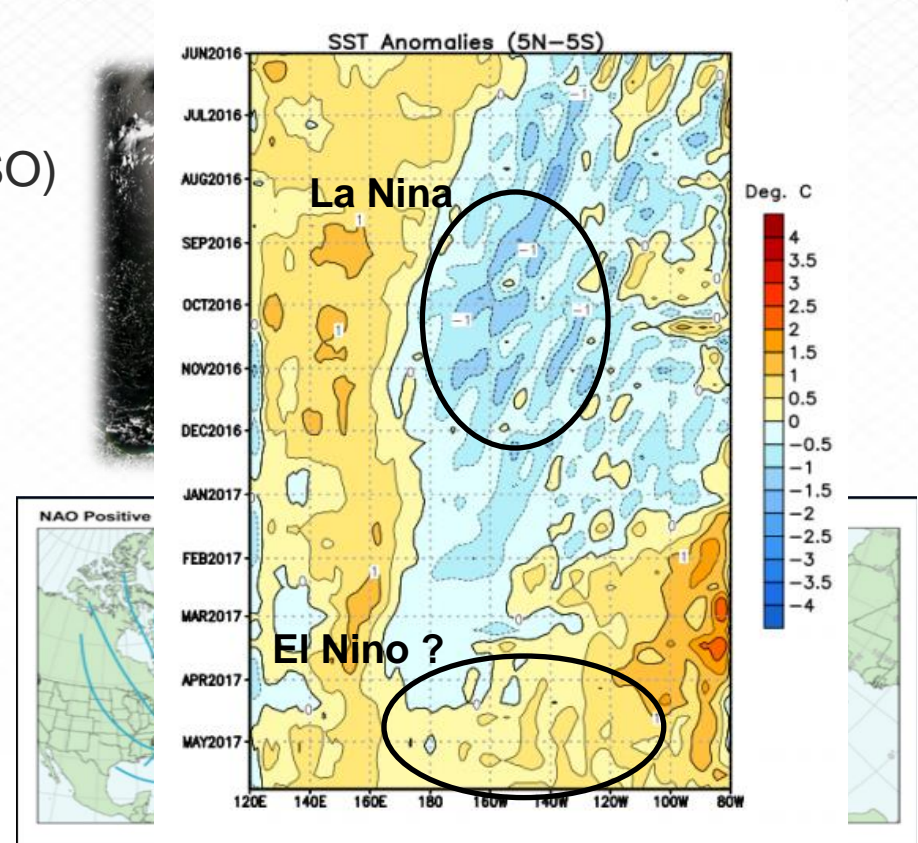

- Secondary factors
  - El Nino Southern Oscillation (ENSO)
  - Saharan Air Layer (SAL)
  - Madden Julian Oscillation (MJO)
- Landfall risk poorly correlated with activity
  - North Atlantic Oscillation (NAO)

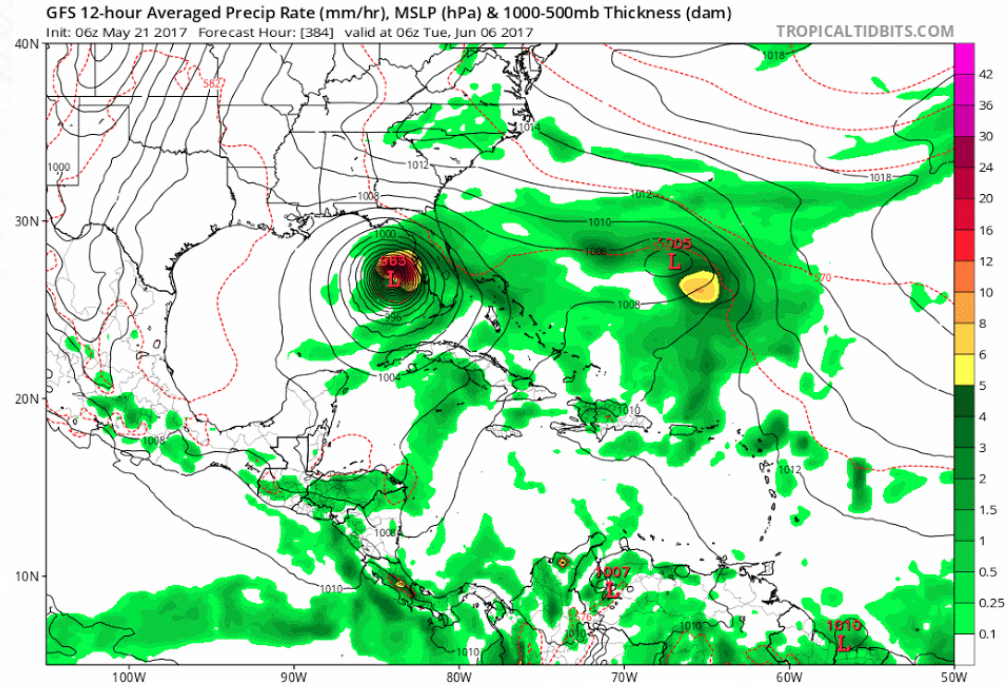

# Why is Near-Term Forecasting Not Suitable for Assessing Hurricane Risk?

Colorado State University	11	4	2
Weather.com	<del>12</del> 14	<del>6</del> 7	<del>2</del> 3
North Carolina State University	11-15	4-6	1-3
AccuWeather	10	5	3
NOAA	11-17	5-9	2-4

# What are Analog Years?

Hurricane seasons since 1950 which had similar atmospheric-oceanic conditions to those currently being experienced and those that we expect to see this summer and fall

Year	Storms	Hurricanes	Major Hurricanes
1957	8	3	2
1965	6	4	1
1972	7	3	0
1976	10	6	2
2002	12	4	2

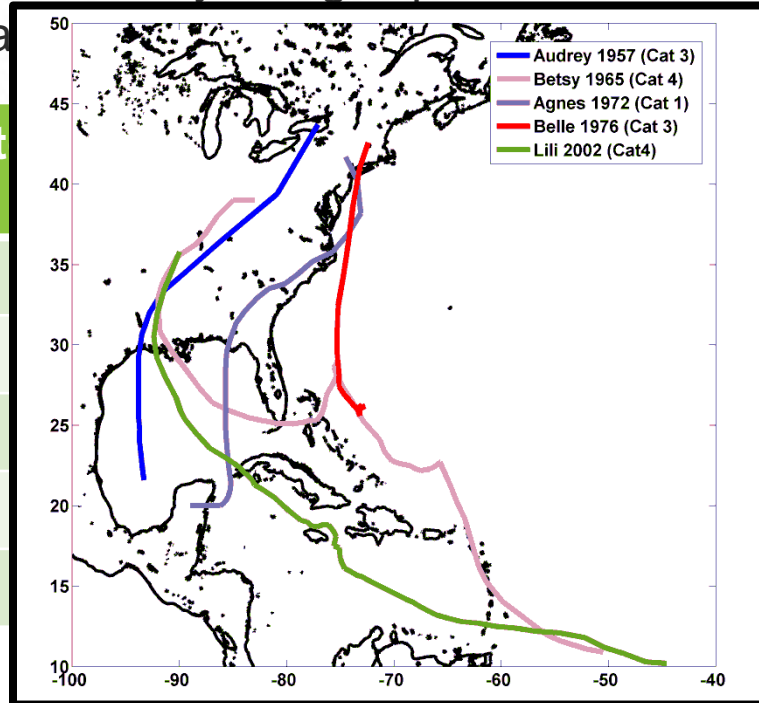

Hurricane seasons since 1950 which had similar atmospheric-oceanic conditions to those currently being experienced and those that we expect to see this summer and fall.

Year	Storms	Hurricanes	Major Hurricanes	Notable Hurricanes
1957	8	3	2	Audrey
1965	6	4	1	Betsy
1972	7	3	0	Agnes
1976	10	6	2	Belle
2002	12	4	2	Lili

## Pop Quiz!

---

- As far as we know, there has never been a season without at least one hurricane. TRUE or FALSE?

**FALSE! (sort-of)**

**1907 and 1914 both officially had zero hurricanes form**

**HOWEVER, during the satellite era (since 1966), every season has had at least one hurricane**
